Endometriosis is a condition where cells similar to the ones lining the womb grow elsewhere in the body. These cells react to the menstrual cycle each month and bleed. However, there is no way for the blood to leave the body. This can cause inflammation, pain and the formation of scar tissues (adhesions)

Endometriosis is most commonly found inside the pelvis, around the ovaries, the fallopian tubes, on the outside of the womb or the ligaments (which hold the womb in place).

NAMASTE — Delivered by Derry Well Women in partnership with Western Health and Social Care Trust.

Duration of Programme 7 weeks.

Facilitated by MacMillian Palliative Care Facilitator and a Complementary Therapist

Background

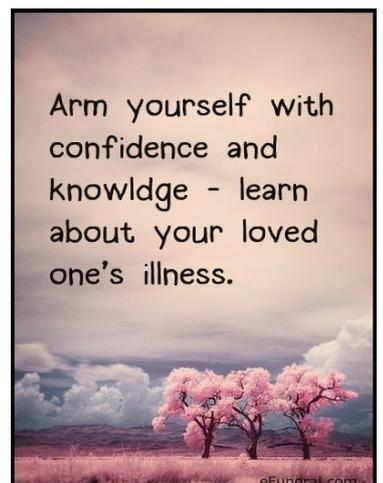

Namaste Care is a structured programme, developed by Joyce Simard in the USA³, that integrates compassionate nursing care with individualised activities for people with advanced dementia in a group setting.

'Namaste' is an Indian greeting which means *'to honour the spirit within'*. The care programme is multi-dimensional, including physical, sensory and emotional elements. The purpose of Namaste Care is to give comfort and pleasure to people with advanced dementia through sensory stimulation, especially the use of touch.

The programme delivered in Derry Well Women will provide carers with the skills and supports they need to give comfort and pleasure to their loved ones. The course will enable carers to experience ways of communicating through touch, sight, smell, taste and sound (the 5 senses) when verbal communication has broken down.

Namaste Care increases the length of time that a carer can spend engaging and connecting with their loved one with advanced dementia and provides a possible solution to meeting their sensory and emotional needs and enriching their quality of life.

Arm yourself with confidence and knowledge - learn about your loved one's illness.

The moves can take a lot of concentration and the precision of each move is important, hence it can take practice to get it right. Pilates will teach you to think about how you use your muscles during the work-out so that you can use them better in daily life. For instance, because much of the focus is on good posture and body mechanics, you will find that you stand and sit taller and walk more gracefully as you become more aware of your body's capabilities. Classes will start with a generic warm up, then the main component with some strengthening and mobility exercises and finish with some stretching. All work will be done in socks/bare feet on the mats. The ability to get up and down from the mat will be required. Everyone is encouraged to work at a level that suits them and easier/more difficult options will be offered.

MINDING MAMMY—Post Natal Depression Pro-

Derry Well Women's eight week programme delivered on a Monday morning is Cognitive Behaviour Therapy (CBT) based and is facilitated by an Accredited Cognitive Behaviour Therapist

This programme will cover topics such as stress, anxiety, relaxation methods, the causes of low mood and tips on how to deal with them. It also focuses on feelings, food and mood, symptoms of depression, unhealthy and healthy coping strategies, negative thoughts, Self esteem, how to be assertive, self criticism and Mindfulness.

COMMON SYMPTOMS OF POSTNATAL DEPRESSION (PND)

- ◆ Feelings of sadness, anger, guilt, exhaustion, panic and inadequacy.
- ◆ Difficultly sleeping, appetite changes, decrease in energy levels, unable to cope, lack of interest or pleasure in usual activities
- ◆ Difficultly concentrating, thinking clearly or making decisions.
- ◆ Thoughts of running away or hurting your baby

Of course not everyone with postnatal depression will experience all these symptoms. However if you can relate well to any of the above and have been experiencing these symptoms the best advice is to go and speak to your doctor and/or enrol onto our 8 week programme. As babies need care and attention frequently, including during the night, it is common to feel tired in the months following the birth of a child, lack of sleep can make you feel both low and irritable. This is normal, and it is important not to confuse this with PND. However, one indication that you are going through PND is if you find it hard to sleep even when you're tired and have the opportunity to do so

A Quote from a sufferer of postnatal depression:

" I had been depressed for a long time and have been advised to attend the course by my G.P. I had not been going out of the house and talked about being in the house with the curtains drawn for days on end. I was on high level of medication and was becoming agoraphobic. After the first session of the course I began to feel more hopeful and that it was possible for me to begin to change. Following two more sessions I began to go out walking with the baby in the pram. I got up early morning and told myself that the day was going to be good because I was going to make sure it was"
